Turn your idea into an MVP

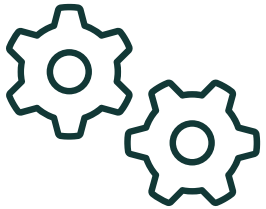

- Congratulations on advancing to ROUND 2 – Build-a-thon ☺
- Based on the proposal from Round 1, let's build a functional MVP!
- In this round, we expect to receive the following deliverables from your team:

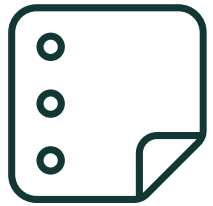

Functional MVP

User Journey

System context diagram

AI Journal
(template provided)

Deliverables

© Copyright Netcompany

Functional MVP

- Your MVP is expected to:
  - Demonstrate the core functionality of your solution
  - Showcase its main user journeys
  - Demonstrate the value it brings to users or the business

Important note: Your MVP does not need to be production-ready. Locally running is acceptable

- Choose **one** format:
  - Web application
  - Mobile application
  - Desktop application
- Submission requirements:
  - An MP4 recorded video, with voice-over/ or on-screen text for explanation. English narration/ or English subtitles are recommended
  - Duration: maximum 7 minutes
  - The video does not need professional editing; however, it needs to be clear enough for judges to follow
  - If MVP has changed since Round 1, please explain the changes and why they were necessary

User Journey

- Your User Flow is expected to:
  - Illustrate how users interact with your solution from start to finish
  - Make the main steps and interactions easy to understand
- Submission format: PDF, maximum 2 pages
- You may use any tool you prefer to illustrate the user journeys
- You are asked to present at least one complete end-to-end user journey that demonstrates the MVP's core value. You do not need to document every possible interaction

System context diagram

- Create a system context diagram to illustrate what's inside your system and what exists outside of it, along with all the essential connections between them
- You may choose any diagram type and use as many diagrams as needed, as long as they clearly illustrate how your software system works.
- Submission format: PDF, maximum 2 pages
- Submission requirements:
  - Keep the diagrams clear, readable and understandable
  - Label all external entities and interactions
  - Show the actual intended system interactions in your MVP

AI Journal

© Copyright Netcompany

AI Journal

- We want to understand how your team used AI to support the project; therefore, please:
  - Complete the provided AI journal template, attached to the email
  - Save it as a PDF file
  - Submit it together with the deliverables

Check list

- MVP Demo Video
- User Journey document
- System Diagram document
- AI Journal template
- All files can be accessed by the judging team
- Name the files short and clearly that accurately reflect the content (e.g., MVP.mp4, User Journey.pdf ...)
- No passwords, API keys, or confidential information are included.

Deadline

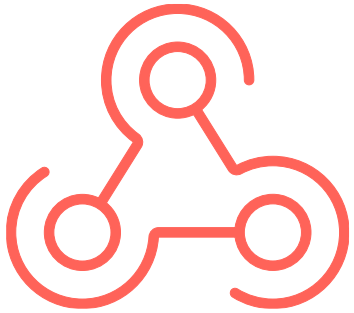

- Please send all the deliverables to email EB.VN@netcompany.com, title: Round 2 – Team name
- Deadline: 10 PM (GMT +7) on 9 November, 2026
- Late submission will not be accepted

Criteria

Engineering quality

Well-implemented, reliable functionality

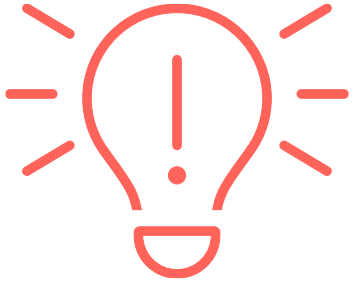

Reasonable architecture

Logical organisation of system components.

Appropriate AI usage

Effective AI use with human validation.

Clear technical reasoning

Technical decisions aligned with the Round 1 problem.
